

ACCRUENT MAINTENANCE CONNECTION

Plan Work with the Full Picture

When your asset map lives in one system and your work orders live in another, planning happens in the gap between them. Crews drive across the service area twice. Work gets ordered against assets that have moved or been retired. Every plan starts with a best guess about where things are.

The Accruent Maintenance Connection and Esri integration closes that gap. Your Esri asset layers appear on the map inside Maintenance Connection, where your team already plan and execute their work. Every job starts with the location and context it needs, not a guess.

Prioritize with Confidence

With your asset map and your work orders in one place, every planning decision starts from the same picture. Here's what the integration unlocks:

See Your Assets in Geographic Context

- View Esri asset layers directly within Maintenance Connection
- Gain a unified view of infrastructure across the asset base
- Identify areas that require attention more quickly

Cluster Work and Cut Travel

- Group nearby work orders into efficient field activities
- Optimize routes across the service area
- Increase time spent completing work and reduce time spent traveling

Prioritize Field Activity by Location

- View work orders in their geographic context
- Prioritize work based on location and operational impact
- Focus resources where they are needed most

One Authoritative Source

- Connect directly to authoritative ArcGIS layers
- Keep spatial data in Esri and maintenance execution in Maintenance Connection
- Ensure teams work from accurate and up-to-date information

Connect Maintenance Connection with Esri Today

Put your Esri investment to work across daily maintenance operations. Eliminate workarounds, reduce miscommunication and give teams the location context they need to make faster, better-informed decisions.

Getting started is simple:

- **No data migration:** Your GIS data remains hosted and governed in Esri. Maintenance Connection reads live layers, so nothing is copied or re-hosted.
- **Quick connection:** Accruent performs a one-time setup to connect your Esri environment to Maintenance Connection. Assets are then linked to work orders within Maintenance Connection based on your configuration.
- **Works with your existing environment:** Compatible with ArcGIS Online or ArcGIS Enterprise 11.4+ and Maintenance Connection Cloud.
- **No per-user Esri licences required:** Planners, supervisors, and dispatchers can view assets and work orders on the map without individual Esri licences.
